SUMMARY

Software Engineer with 5+ years of experience building enterprise applications across fintech, SaaS, cloud, and data-driven environments using C#, Python, SQL, REST APIs, and cloud technologies.

SKILLS & INTERESTS

- **Programming Languages:** Python, C#, JavaScript, TypeScript, Java, SQL
- **Frontend Technologies:** Angular 8/12/16, React, RxJS, Material UI, Tailwind CSS, Bootstrap, jQuery
- **Backend Frameworks:** Flask, Django, ASP.NET Core Web API, RESTful Services
- **AI & Intelligent Systems:** Azure Bot Framework V4, Azure AI Search, LUIS (CLU), QnA Maker (CQA), NLP Pipeline Development, Conversational AI, Prompt Engineering, Responsible AI Practices
- **Database Systems:** PostgreSQL, MongoDB, SQL Server, Amazon RDS
- **Cloud Platforms:** Azure (Functions, App Services, Storage), AWS (EC2, S3, RDS), Oracle Cloud
- **DevOps & Operations:** Docker, GitHub Actions, Azure DevOps, CI/CD Pipelines, Nginx, GitLab
- **Security & Enterprise:** JWT, OAuth 2.0, RBAC, API Security, CORS Policies, VAPT Remediation
- **Automation & Monitoring:** ServiceNow (Incident, Change), Red Hat Ansible Automation Platform, Splunk (log monitoring & dashboards), SQL Server Reporting Services (SSRS)

WORK EXPERIENCE

HCL TECHNOLOGIES

Sept 2025 – May 2026

Software Engineer

Client: Deutsche Bank, Jacksonville, FL

- Developed Python backend applications and automation services supporting enterprise-scale workflows and business operations.
- Built reusable APIs, libraries, and automation frameworks, improving code maintainability and development efficiency.
- Implemented CI/CD pipelines using GitLab and version control best practices to support automated software delivery.
- Integrated backend services with infrastructure and cloud platforms using Python and Ansible-based automation solutions.
- Collaborated with engineering teams to resolve production issues, optimize application performance, and deliver new functionality.
- Participated in Agile development processes including sprint planning, code reviews, testing, deployment, and release support.

SAINT LOUIS UNIVERSITY

Feb 2024 – Aug 2024

Software Engineering Intern

Client: The Haven of Grace, St. Louis, MO

- Developed a full-stack web application using React (frontend) and Python Flask (backend), implementing secure and scalable architecture.
- Built RESTful APIs using Flask MVC and MongoDB for data storage, retrieval, and reporting.
- Implemented JWT authentication and RBAC authorization to secure client data access.
- Added password encryption, token-based reset functionality, CSV exports, and dynamic form validations.
- Deployed the application on Vercel using GitHub Actions CI/CD and configured DNS for production hosting.

APPS ASSOCIATES LLC

Nov 2021 – Aug 2023

Associate Cloud Consultant

Client: SmartDog

- Developed enterprise SaaS dashboards using Angular 12, WebSockets, lazy loading, RxJS, and PWA capabilities across Operations, Cost Management, Compliance, and Service Management modules.
- Built and maintained backend services using Python Flask, Celery, PostgreSQL, and Amazon RDS, supporting asynchronous processing and workflow automation.
- Developed and optimized RESTful APIs through request/response optimization, JSON processing, and database tuning, improving application performance and scalability.
- Integrated AWS cost and usage data from cloud management APIs to deliver reporting, analytics, and operational insights for enterprise customers.
- Collaborated with cross-functional teams on feature development, code reviews, CI/CD releases, and Agile sprint delivery.

Client: Unilever

- Developed enterprise chatbot applications using Azure Bot Framework V4, delivering conversational experiences through dialog management, adaptive cards, and state-based interactions.
- Built intelligent chatbot capabilities using LUIS, QnA Maker, and Azure AI Search to support intent recognition, knowledge-based responses, and natural language interactions.
- Integrated chatbot solutions with Azure Functions, .NET APIs, and backend services to automate business workflows and enable real-time information retrieval.
- Deployed multi-channel bots across Web Chat, Direct Line API, and enterprise communication platforms, ensuring secure and scalable user engagement.
- Implemented Application Insights monitoring, Azure Storage, authentication, and security controls to improve observability, reliability, and enterprise compliance.

Client: Bajaj FinServ - B2B Financial Platform

- Migrated legacy .NET Framework applications to Angular 8 SPA, implementing component-based architecture, routing, reactive forms, lazy loading, and reusable UI components to improve user experience.
- Developed and maintained ASP.NET Core Web APIs and RESTful services in C#, enabling secure and scalable communication between frontend and backend systems.
- Optimized SQL Server queries, Entity Framework operations, and stored procedures, improving application performance for high-volume financial transactions.
- Implemented JWT authentication, refresh token workflows, RBAC authorization, and CORS policies, ensuring secure access and compliance with enterprise security standards.
- Applied SOLID principles, dependency injection, unit testing, and secure coding practices, while addressing VAPT findings and improving application maintainability and code quality.

EDUCATION**Saint Louis University, St. Louis, MO***Master of Science in Information Systems***May 2025****Lendi Institute of Engineering & Technology, India***Bachelor of Engineering in Computer Science Engineering***May 2018****Relevant Coursework**

Applied Analytics and Methods, Mobile and Web Development, Advanced Software Development, Information Retrieval, Ethical and Evidence Based Decision Making, Data Visualization.
